\$395/ - 1 - 20		\$456/ - 1 - 20
\$365/ - 21 - 40		\$425/ - 21 - 40

MULCH

Trees 2" caliper or smaller require about .5CY of mulch each.

Trees 3" caliper or larger require about 1CY of mulch.

Local, Fresh Woodchips:	\$95/
Local, Screened Compost (recommended):	\$145/
Shredded Washington Brown Cedar:	\$165/

We offer 3 mulching options to suit your visual preference and landscape's needs. Whichever you choose, rest assured that mulch is generally necessary for keeping your new trees' roots moist and well fed over the growing seasons ahead. **Plus, it helps keep your water bill as low as possible by retaining soil moisture!**

IRRIGATION

Aspen trees LOVE water! It's important to plant them with good, moisture-retaining soil and to tuck the young root ball under a thick, cooling layer of compostable mulch. **It's also CRUCIAL to connect the new trees to a drip irrigation system!**

We plant all of our "delivered & planted" trees with a backfill mixture of native soil and our "Summit County Black Gold" topsoil-vermicompost blend. **Along with mulch and drip irrigation,** this careful planting method gives our trees the strongest possible start through their first season of growing into their new home.
